Design and Development of Weight Sensors Based Smart Shopping Cart and Rack System for Shopping Malls

Basavaraj Hadimani

Computer Scientist @ Adobe | Bachelor of Engineering, Javascript, React js, Node
Bengaluru, Karnataka, India

Summary

As a Computer Scientist at Adobe, I apply my skills and knowledge in React, Javascript, Node, Redux Thunk, and other technologies to create innovative and user-friendly products and solutions. I joined Adobe in May 2022, after working as a Senior Software Engineer and a Software Development Engineer at Myntra, an online fashion platform, for over two years. During my time at Myntra, I contributed to the development and enhancement of various features and functionalities of the website and the app, such as the checkout process, the cart management, the payment integration, and the performance optimization. I also published a paper on ScienceDirect in 2018, where I proposed and implemented a low-cost and efficient Smart Shopping Cart system that can reduce the time and burden of the customer during the shopping and billing process. I hold a Bachelor of Engineering degree in Electronics and Communication Engineering from R. V. College of Engineering, Bangalore, where I graduated in 2016. I also have certifications in C and C++ programming from Aptech. I am passionate about creating impactful and delightful digital experiences for customers, and I enjoy collaborating with other talented and driven professionals in the field. I am always eager to learn new skills and technologies, and to challenge myself with complex and creative problems.

Experience

Adobe
Computer Scientist
May 2022 - Present (4 years 2 months)
Bengaluru, Karnataka, India

Myntra
2 years 10 months
Senior Software Engineer
April 2021 - May 2022 (1 year 2 months)

Bengaluru, Karnataka, India

Software Development Engineer

August 2019 - April 2021 (1 year 9 months)

Bengaluru Area, India

Quikr

Software Development Engineer

May 2018 - July 2019 (1 year 3 months)

Bengaluru Area, India

Projects Done:

1. WMS(Warehouse Management System)

Project description : Quikr certified products are being posted as Ads in Quikr website using this website. Products are being uploaded in bulk. Quality check status is stored in DB. Offline sale products are also tracked in this application.

Technologies used : React, Redux, Express, Node, Java(Play), MySql, Mongo

2. Quikr Bazaar

Project description : Quikr Mobile and Tablets, Home and Lifestyle, Electronics and appliances are being posted as Ads in this section of Quikr. My contribution is more towards showing EMI on each products, banks list available for the particular product and declaring lowest start price per month for each product.

Technologies used : React, Redux, PHP, MySQL

3. QOMA(Quikr Order Management System)

Project description: When a user purchases Quikr assured mobile or tablet, An entry goes to QOMA. All the purchased products are listed here. Quikr employee calls to the item ordered user and confirms whether its real or fake order, then updates the status of order from CREATED to CALL CONFIRMED or CALL REJECTED. Order is taken care based on the QOMA status.

Technologies used : PHP, MySQL

4. Seller Console

Project description : This application is used for the sellers in Quikr. They can see the status of their posted items. A order confirmed item entry goes to seller console only when the item has status as CALL CONFIRMED. Here seller generates invoice and packslip and ships to the user.

Technologies used : PHP, MySQL

5. LFR

Project description : All second hand returned Mobile phones are being collected from stores by doing quality check. Based on the Quality of the product(Physical check, Software check, Accessories such as Charger, Earphone, Box), Price of the item is generated.

Technologies used : React, Redux, Java spring boot, MySQL, MongoDB

Aricent

Software Engineer

April 2017 - March 2018 (1 year)

Bangalore

Projects done:

1. Project development tracking

Jan 2018 - Apr 2018

Project description :

This web application is developed in order to maintain the status of the project which is in the development state, in an organization. Redux is used for the data management. REST APIs are developed using express js which used to store the Manager entered data in mySQL database. Project is being tested using enzyme. type script is the language used to develop all components of react. Webpack is used as a module bundler.

2.Training sheet update

Dec 2017 – Jan 2018

Project description

A sheet, which gives an information about the training happening in the organization

Has to be created whenever an user fills details in a web browser. User data should be

stored in a table. User has the control to delete or update any row dynamically.

Application should be developed using React JS with responsive display (Bootstrap)

Technologies used:

React JS, Bootstrap, Web pack, Type script, SaSS, Mocha-Chai, HTML5, CSS3

3.Employee timesheet

This projects makes use of Servlets, HTML, css, JavaScript, MySQL techniques to maintain a daily status of the task assigned to the employee. Login page is used to aknowlegde the entry user. next page for the dialy updates and a database is maintained to store the detail of the employee

Technologies used:

Java, servlet, HTML, CSS, JDBC, MySQL, Javascript
